

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PSYCHOLOGY AND SOCIAL PRACTICE.*

CONTENTS:

<i>Psychology and Social Practice</i> : PROFESSOR JOHN DEWEY	321
<i>The Marine Biological Laboratory</i> : PROFESSOR E. G. CONKLIN.....	333
<i>Report on the Initial Work of the State Geological Survey of Nebraska</i> : PROFESSOR ERWIN HINCKLEY BARBOUR.....	343
<i>Scientific Books</i> :—	
<i>Kingsley's Vertebrate Zoology</i> : PROFESSOR JACOB REIGHARD. <i>Fohwell's Water-Supply Engineering</i> ; <i>Hazen's Filtration of Public Water Supplies</i> : PROFESSOR MANSFIELD MERRIMAN. <i>Benjamin on California Mines and Minerals</i> : R. H. T. <i>Books Received</i>	344
<i>Scientific Journals and Articles</i>	348
<i>Societies and Academies</i> :—	
<i>Geological Society of Washington</i> : F. L. RANSOME, DAVID WHITE. <i>Biological Society of Washington</i> : T. W. STANTON. <i>The Philosophical Society of Washington</i> : E. D. PRESTON. <i>Torrey Botanical Club</i> : EDWARD S. BURGESS. <i>The New York Section of the American Chemical Society</i> : DR. DURAND WOODMAN. <i>The Academy of Science of St. Louis</i> : PROFESSOR WILLIAM TRELEASE.....	348
<i>Notes on Physics</i> :—	
<i>Drude's Annalen</i> ; <i>Radiant Heat</i> ; <i>Thermal Conductivity</i> . W. S. F.....	352
<i>Engineering Notes</i> : R. H. T.....	353
<i>Botanical Notes</i> :—	
<i>Botany at Wood's Holl</i> ; <i>Minnesota Botanical Studies</i> ; <i>Harper's Studies in Cell Division</i> ; <i>Short Notes</i> : PROFESSOR CHARLES E. BESSEY.....	354
<i>Scientific Notes and News</i>	356
<i>University and Educational News</i> :—	
<i>Instruction in Archaeology and Ethnology in the University of Pennsylvania</i> . General.....	359

IN coming before you I had hoped to deal with the problem of the relation of psychology to the social sciences—and through them to social practice, to life itself. Naturally, in anticipation, I had conceived a systematic exposition of fundamental principles covering the whole ground, and giving every factor its due rating and position. That discussion is not ready to-day. I am loath, however, completely to withdraw from the subject, especially as there happens to be a certain phase of it with which I have been more or less practically occupied within the last few years. I have in mind the relation of Psychology to Education. Since education is primarily a social affair, and since educational science is first of all a social science, we have here a section of the whole field. In some respects there may be an advantage in approaching the more comprehensive question through the medium of one of its special cases. The absence of elaborated and coherent views may be made up for by a background of experience, which shall check the projective power of reflective abstraction, and secure a translation of large words and ideas into specific images. This special territory, moreover, may be such as to afford both sign-posts and broad avenues to the larger

MSS. intended for publication and books, etc., intended for review should be sent to the responsible editor, Professor, J. McKeen Cattell, Garrison-on-Hudson, N. Y.

* Address of the President of the American Psychological Association, New Haven meeting, December, 1899.

Numerous half-tone and other illustrations, maps and tables of statistics aid the reader in obtaining a most satisfactory understanding of the extent and importance of the mining industries of California.

R. H. T.

BOOKS RECEIVED.

Richter's Organic Chemistry. Edited by PROFESSOR R. ANSCHÜTZ. Translated by EDGAR F. SMITH. Third American Edition. Philadelphia, P. Blakiston's Son & Co. 1900. Vol. II., pp. vi + 671. \$3.00.

Malay Magic. WALTER WILLIAM SKEAT. With preface by C. O. BLAGDEN. London and New York, The Macmillan Company. 1900. Pp. xiv + 665. \$6.50.

Lessons in Elementary Physiology. THOMAS H. HUXLEY. Edited by FREDERIC S. LEE. New York and London. 1900. Pp. xvi + 577.

The Teaching of Elementary Mathematics. DAVID E. SMITH. New York and London, The Macmillan Company. 1900. Pp. xv + 312. \$1.00.

SCIENTIFIC JOURNALS AND ARTICLES.

The Plant World for February has for its leading article 'Notes on the Edible Berries of Alaska,' by Walter H. Evans, who states that they are of wonderful abundance and variety. John M. Coulter treats of the 'Geographical Distribution of Conifers,' Byron D. Halsted presents a note on 'Coloration of Leaf for Seed Distribution,' and K. C. Davis discusses the 'Wild and Garden Pæonies in America.' Mrs. Caroline A. Creevey continues her series of articles on 'Plant Juices and their Commercial Values,' amber, copal and turpentine being among those discussed in this number. The Supplement on 'The Families of Flowering Plants' contains the Ginkgoales, the Pinaceæ and the Taxaceæ.

SOCIETIES AND ACADEMIES.

GEOLOGICAL SOCIETY OF WASHINGTON.

THE 97th regular meeting was held at the Cosmos Club, February 14, 1900.

Under informal communications, Mr. Bailey Willis stated that a diamond drill hole at The Dalles, on the Columbia River, had reached a depth of 916 feet and had penetrated several flows of Columbia basalt, distinguished by layers

of clay and by differences of texture. No exact section has been kept. A piece of core from 916 feet in depth is shown by examination in thin section to be basalt. The object of the boring, which is a private enterprise, is to prospect for coal.

Mr. H. W. Turner proposed the adoption and use of the term *Sierran*, originally suggested by Professor Le Conte, to distinguish the erosion interval of the early Pleistocene. The actuality and importance of this early Pleistocene erosion were illustrated with reference to the eastern slope of the Sierra Nevada. It was shown that the *Sierran* cañons had in some cases been occupied by lava flows upon which the moraines of Glacial time are resting.

The following papers were presented on the regular program:

(1) 'A peculiar Clastic Dike and its Associated Ore Deposits,' by Mr. F. L. Ransome. This dike is exposed in the workings of the Wedge and Bachelor mines, near Ouray, Colorado. It fills a normal fault-fissure, of small throw, cutting nearly horizontal beds of sandstone and shale. The filling material came from above, and is largely composed of flakes of black shale, derived from a bed which is traversed by the fissure, but which limit the upward extension of the dike. This material was subsequently forced by pressure into all the branches of the fissure and has the form of an eruptive dike. It has been explored to a depth of 630 feet and has an average width of 2 or 3 feet. The ore, which is an argentiferous tetrahedrite, or freibergite, occurs alongside of, or in the dike, in spaces opened by later movements. These have been in part bedding faults, which have dislocated the dike along nearly horizontal planes.

(2) 'Wood River Mining District, Idaho,' by Mr. Waldemar Lindgren. The silver-lead mines of Wood River are located in southern central Idaho, some 50 miles north of Snake River. The geological formations consist of a sharply folded series of Paleozoic, probably very largely Carboniferous, sediments consisting of limestones, quartzites, and slates. Imperfect fossils indicating Upper Carboniferous were found in it at two localities. The large granite area of southern Idaho abuts against the sedimentary
